# Introduction

## Market Background

The video game industry is growing with new products and technology and could be worth over \$200 billion by the end of 2021. As technology expands, video content, products, virtual reality, special events, and video game tournaments increase. These are just ways the industry is turning into a "recurring revenue model" and capitalizing on increased demand.

Equilibrium is a new cryptocurrency token, launched 27<sup>th</sup> August 2021.

Equilibrium has unique character as compared to other digital currencies. Since it is a token paired with games. This project was developed by true gamers who want people to enjoy and earn at the same time. People can earn rewards with every game they play.

Games by Equilibrium Games and partners uses blockchain technology and NFTs to empower the players freedom to trade and market as they want. NFTs are an emerging part of the global game market: virtual tokens for digital scarcity, security, and authenticity. Each NFT is distinct or unique, it is indivisible, and it is not interchangeable for another.

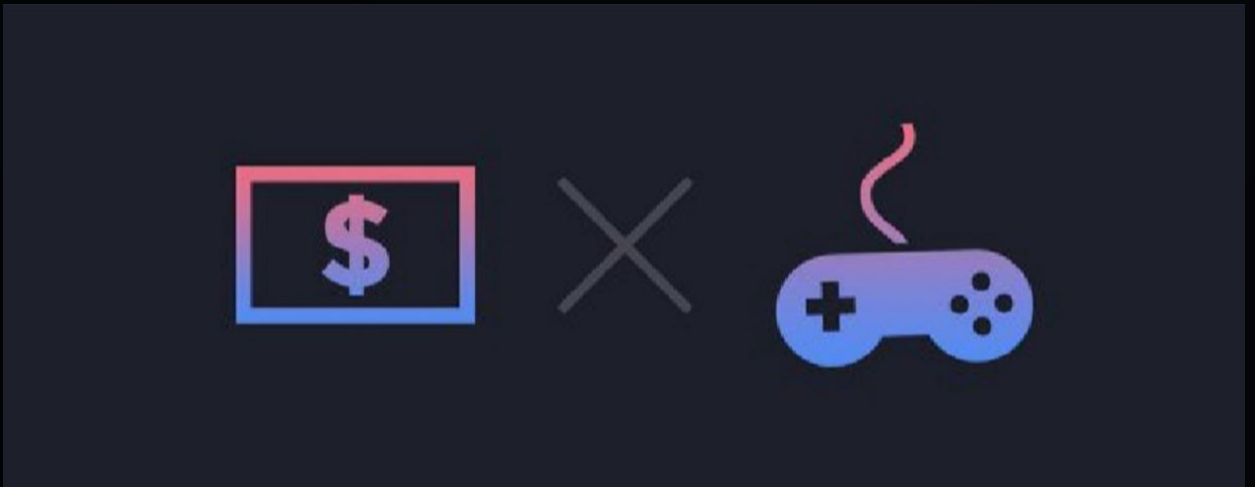

# Play-to-Earn Model

## Game Model

Gaming should be fun. Rather than having to think about every single penny you spend and taking up all your time, wouldn't it be great to play to earn?

Equilibrium Games has built a unique infrastructure that builds on the growing XRP Ledger and combines it with Gaming through unique NFTs. s but also generate unique NFTs that can be used across a multitude of games. This gives Equilibrium Gameusers the unique ability to play for free and to earn in one single process.

Imagine a game where you don't actually spend your hard-earned money to purchase in-game resources or heroes, but rather a savings account where the more you save the more resources you earn the more money you get.

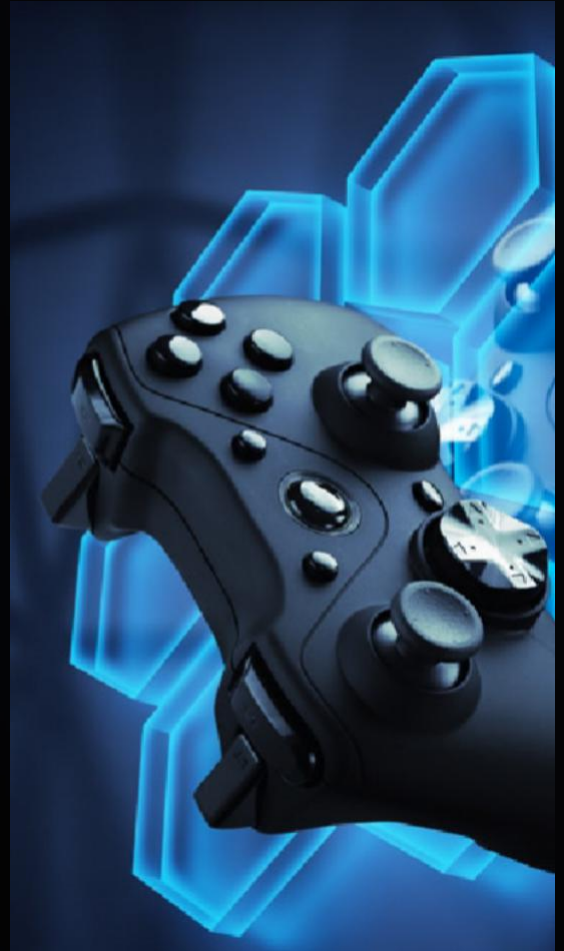

# Blockchain Games and NFTs

## Blockchain Games

The application of blockchain technology has developed non-stop in recent years and this technology not only adapts successfully to digital currency but also in other areas such as finance, logistics, and especially in the gaming industry. Why? because blockchain technology will restructure the way games are created, managed, and played for both game creators and game players.

In fact, most online games are designed and managed based on a centralized model. That means that the game creators or gaming companies have full control over every data stored on the server. Data, in this gaming context, consists of account info and the server that stores all the in-game assets the players such as virtual money, items, collectibles, etc. It could be seen that players don't have any power and full ownership of collectible items and account information in the game. It is one of the crucial issues that blockchain technology can solve and create a revolution in this industry.

In Blockchain things are different, as the system is decentralized, which means that there is no central authority and the players have access to their own parts of the game like tokenized assets and digital collectibles (lands and buildings) that helps them buy, sell and transfer them whenever they want. In other words, applying Blockchain technology in the game industry will create a player-driven economy where players can trade with each other without being managed by a centralized system.

# Blockchain Games and NFTs

## Blockchain Games

Blockchain's adoption in gaming will go beyond what traditional gaming is doing now. Game players can now have full access and ownership of their digital assets that will not be eliminated by game owners and they can keep their assets for life and trade them with other players at marketplaces. The next level in the gaming industry is promising.

## NFT and Games

Equilibrium Games makes it possible to tokenize virtual items and sell them through our marketplace or external marketplaces.

Equilibrium Games uses blockchain technology and NFTs to empower the players. NFTs are an emerging part of the global gamemarket: virtual tokens for digital scarcity, security, and authenticity. Each NFT is distinct or unique, it is indivisible, and it is not interchangeable for another.

# Equilibrium Games

As passionate gamers and crypto enthusiasts we are developing games that are rewarding the player to play. Play to earn model is the next thing in gaming industry. Many gamers thought about going pro and earn money while playing. Now this is open for everyone by playing.

## Rewards

20% of the total EQ supply will be allocated for Server rewards who the player can receive by playing our games doing quests and killing monsters, first boss monster kills and events....

## Partners

Equilibrium Games is an idea to integrate Blockchain into games and we are open to integrate other gaming development companies under Equilibrium Games to create a multi market for gamers.

## Cosmetic Items (World of Equilibrium)

Cosmetic/Vanity items are collectable NFT's. Cosmetic items as well as normal items will be trade able in the marketplace with EQ tokens.

Player can earn through trading these items.

## Land and Building sells (World of Equilibrium)

In World of Equilibrium you can acquire lands and buildings. The owner of a land can earn passive income by taxing other players for services used in their land and receives an amount of EQ Tokens found by other players in their land.

## Marketplaces

Choose to trade with other players in the game or trade on exchanges your earned Equilibrium. Trade the ownership of buildings, terrains, levels and factions as NFT's.

# Mission & Features

## Mission

Equilibrium Games mission is to build a system where users can play, share, and trade without central control, enjoying secure copyright ownership with the ability to earn EQ Tokens.

Equilibrium is a token that aims to combine the power of gaming and crypto into one. The gaming industry is booming with games that reward the player for playing. Equilibrium is going to take this to the next level by having no entry cost to participate in the games and earn directly.
